

$K^* \mu\mu$ toy MC results.

- Chris Langenburgh prepared a "official TOY MC" <- LOL
- With unfolding of the angles done by him.
- Last week I wasted analysing this MC.

Strategy

- First try to get back the parameters that were put inside the MC.
- X-check the unfolding.
- Perform a fit and MM.

WTH is going on with [7.0, 8.0] ? 1/3

- With those parameters from EOS the PDF is negative? <- checked , no
- Some boundary conditions? <- checked by simulating my toy, no thing going on there.
- The parametr that EOS gives you are not the one they simulated? <- YES!

WTH is going on with [7.0, 8.0] ? 2/3

- First I simulated MY toy MC:

Listing 1: My unofficial SHIT MC:

```

J3    -0.0246584 +/-  0.000335458      true value: -0.0248
J4    0.261117  +/-  0.000364695      true value: 0.2609
J5    -0.411436 +/-  0.000335284      true value: -0.4113
J6s_1 -0.411211 +/-  0.000281637      true value: -0.4113
J7    -0.000505415 +/-  0.000363604    true value: 0
J8    -0.000673747 +/-  0.000377374    true value: -0.0007
J9    0.000422372 +/-  0.00033566      true value: -0.0007
```

- PDF is fine, can be fitted(here MM).

WTH is going on with [7.0, 8.0] ? 3/3

- Author of this official TOY MC should repeat maths 1 at university.
