Preliminary limit

Note

- With Paul and Basem we made the limit script working.
- Just a test, we took previous alpha, and new 2011 pdfs.
- Limit:  $5.3 \times 10^{-8}$
- New binning and Blending did the job.
- Rule of thumb  
 $5.3 \times 10^{-8} / \sqrt{3} = 3.05 \times 10^{-8}$
- Reminder babar had  $3.2 \times 10^{-8}$ .
- From looks of it we can do even better, Trash bins are smaller now :)

# Note updates

- Wrote up BLEND section. Jon could you check and comment what is totally non understandable?
- Ntuples with triggers arrived.
- Need to write up binning optimisation(for tmr).

# Note missing

- background chapter <- need 2 days for eta fits+binning for them.
- normalization
- Could we ask for WG aproval on 5<sup>th</sup>?
